Introduction

This Story Map provides a visual representation of the user stories for the Financial Management System (FMS), organized by activities and prioritized into implementation layers. The map helps stakeholders understand the scope of the system, the relationships between features, and the planned implementation sequence.

Financial Management System Story Map

Implementation Plan

The story map is organized into three implementation layers:

- **MVP (Release 1):** Core functionality required for basic financial management operations, planned for Sprints 1-3.
- **Enhancements (Release 2):** Additional features that provide improved capabilities and user experience, planned for Sprints 4-6.
- **Future (Release 3):** Advanced features that will be implemented in future releases based on user feedback and business priorities.

Each sprint is planned for two weeks, with Release 1 scheduled for completion by October 1, 2025, and Release 2 by December 15, 2025. Release 3 features will be prioritized and scheduled after the successful implementation of Release 2.
